

Capturing of item master data

quickly, securely, precisely

Other benefits at a glance:

360° PRODUCT PHOTOS FOR E-COMMERCE

- › Positively influence purchasing decisions
- › Reduce return rates

IDENTIFICATION OF ITEMS

- › Misplaced warehouse items can be identified quickly
- › Handling of returned goods is made easier

OPTIMISATION OF SHIPPING COSTS

- › Processes such as "pick & pack" can be handled properly without error
- › Means of transport and shipping charges selected using the data

OPTIMISATION OF WAREHOUSE CAPACITY

- › Existing warehouse capacity is used more effectively
- › Avoids the need for expanding the capacity

ERROR-FREE SHIPPING/CUSTOMS PAPERS

- › The individual weights listed for the items correlate with the recorded overall weight of the pallet

UNIMAGINED POSSIBILITIES

- › Many warehouse processes can only be performed with the correct master data

We will be happy to meet and discuss how you can benefit!

IMS 360

THE 3D LASER SCANNER
AUTOMATICALLY CAPTURES
THE ITEM MASTER DATA FOR
LOGISTICAL PROCESSES –
QUICKLY, SECURELY, PRECISELY.

The IMS 360 is being successfully
used by renowned companies –

KAPTURA
Improving Your Efficiency

The **Item Master Solution IMS360** from **KAPTURA** helps you organise your processes for capturing master data and identifying items efficiently and reliably.

After entering the item number/designation and placing the item in the scanner, the process starts automatically at the push of a button. In less than two minutes, you will have accurate, comprehensive master data and 360° product photos. If desired, the photos can be given a watermark and white background.

IMS 360 software: clearly arranged user interface with rotating 3D model and item master data.

Interior of the IMS 360: the item is simply placed in the middle of the rotating turntable.

The software generates a unique **multilevel item ID**: this is the key element of our system solution. Every item is given an identity which makes it unique and recognisable. This means complicated, error-ridden manual processes are a thing of the past. Your employees will need less (training) time and know-how to be able to reliably capture master data on incoming goods or returns and identify items.

When this is projected onto your warehouse logistics, this represents an enormous **potential saving** for your annual result.

Features of the IMS360

- › Captures item master data at the touch of a button
- › Calculates key figures and produces a multilevel item ID
- › Accurate master data in less than a minute
- › Automatically identifies already captured items
- › Produces high-resolution colour photos from different viewing angles
- › Scanner unit is fixed on rollers for flexible movement

Modular, mobile, flexible

- › Item sizes up to 60x60x60 cm, weights up to 32 kg – the appearance and mechanisms on the basic system can be tailored to your needs and enhanced.
- › Operating-system independent: The scanner can be controlled using any operating system, e.g. Windows, Mac OS, Linux, iOS, Android.
- › 3D visualisation can be called up via all end devices.
- › Alternative scanner control via JSON interface. Enables direct integration into different ERP or warehouse management systems, e.g. SAP, MS Dynamics, etc.

Why not see for yourself – we will be happy to explain the possibilities offered for your specific requirements, circumstances and objectives!
